INNOVATIVE SWEEPING TECHNOLOGY MADE IN GERMANY

THE UNIVERSAL

Thanks to its performance, the VS10 can be used for a wide range of applications. Especially in road construction, the machine from the 10 m³ class achieves the best cleaning results and always meets the requirements that are directed at it.

Large sweepers from BROCK Kehrtechnik GmbH are innovative sweeper units made in Germany paired with the customers' favourite chassis types. Efficient, modern drive concepts form the interface between the chassis and sweeper body. The sweeper unit can be driven, for example, by an additional superstructure engine according to country-specific exhaust emission standards or a hydrostatic drive that allows the machine to run at an optimum sweeping speed.

The sweeping units are just as freely selectable as the type of drive. Adapted to their future areas of application, the robustly designed sweeping unit types can be freely selected and assembled from the BROCK modular system. Whether double plate broom on one side or single plate broom on both sides? The modular principle offers a multitude of possibilities.

In addition, BROCK sweepers can be equipped with many well thought-out accessories. In this way, the possible applications of every sweeper are increased and specialized.
Additional equipment such as the leaf suction device is particularly suitable for municipalities and can be used in many different ways.
Special surface suction systems achieve the best cleaning results on construction sites or airports.

TRENDSETTING
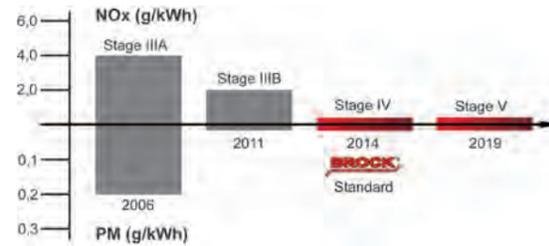

Modern drive concepts guarantee that the strict emission guidelines of the European Union are met and ensure clean streets and less pollution for humans and the environment.
